

# AMPR May 18

Submitted by dcecil on Wed, 05/18/2011 - 08:37

- [AMPR](#)

Flight Date:

Wednesday, May 18, 2011

Status:

Yellow

AMPR performed similarly to earlier flights... 6 good channels, 2 that have trouble. One 37 GHz channel saturates quickly in the flight, and one 85 GHz channel develops a lot of noise. The other channels mostly look good. The H and V labels apparently were flipped when we changed offset boards over the weekend.
